## URINARY BLADDER STAGING FORM

| <p><b>PROGNOSTIC FACTORS (SITE-SPECIFIC FACTORS)</b></p> <p><b>REQUIRED FOR STAGING:</b> None</p> <p><b>CLINICALLY SIGNIFICANT:</b></p> <p>Presence or absence of extranodal extension: _____</p> <p>Size of the largest tumor deposit in the lymph nodes: _____</p> <p>World Health Organization/International Society of Urologic Pathology (WHO/ISUP) grade : _____</p>  | <p><b>General Notes:</b><br/>For identification of special cases of TNM or pTNM classifications, the "m" suffix and "y," "r," and "a" prefixes are used. Although they do not affect the stage grouping, they indicate cases needing separate analysis.</p> <p><b>m suffix</b> indicates the presence of multiple primary tumors in a single site and is recorded in parentheses: pT(m)NM.</p> <p><b>y prefix</b> indicates those cases in which classification is performed during or following initial multimodality therapy. The cTNM or pTNM category is identified by a "y" prefix. The ycTNM or ypTNM categorizes the extent of tumor actually present at the time of that examination. The "y" categorization is not an estimate of tumor prior to multimodality therapy.</p> <p><b>r prefix</b> indicates a recurrent tumor when staged after a disease-free interval, and is identified by the "r" prefix: rTNM.</p> <p><b>a prefix</b> designates the stage determined at autopsy: aTNM.</p> <p><b>surgical margins</b> is data field recorded by registrars describing the surgical margins of the resected primary site specimen as determined only by the pathology report.</p> <p><b>neoadjuvant treatment</b> is radiation therapy or systemic therapy (consisting of chemotherapy, hormone therapy, or immunotherapy) administered prior to a definitive surgical procedure. If the surgical procedure is not performed, the administered therapy no longer meets the definition of neoadjuvant therapy.</p> |       |   |                                       |   |  |   |   |  |  |  |
